EDUCATION

MLR Institute of Technology

B.Tech in Computer Science & Machine Learning (CGPA: 8.12)

Hyderabad, Telangana

2022 – 2026

Sri Chaitanya Junior College

Intermediate, MPC (95.4%)

Hyderabad, Telangana

2020 – 2022

EXPERIENCE

1000xDevs (ThousandX Ventures LLP)

Oct 2025 – Present

SDE 1

Remote • Hyderabad, India

- Core-built **Save8.ai**, an **agentic marketplace** platform, from early development: engineered the backend **agent + scraping pipeline** that resolves a submitted product URL to matching listings across marketplaces at lower prices; actively work with the team on **server-side architecture** and app-side features; live with **40K+ downloads** across App Store, Play Store, and web.
- Built Save8's **gift card marketplace** end to end: integrated **Razorpay** payment gateway for in-app purchases, onboarded multiple **gift card providers** onto the platform, and built the **dynamic linking system from scratch** for referral and influencer attribution tracking.
- Also shipped **Bartr (NestJS, React Native)**, a UAE barter marketplace app with deep linking and real-time chat; **Astronode**, an astrology app using **LangGraph + vector DB** for personalized context; and an ops **admin portal (Django, Next.js)** for client inventory management.

Starkins Solutions

Feb 2025 – May 2025

Full Stack Developer Intern

Hyderabad, India

- Led a 4-member team to deliver 3+ full-stack apps, including **KisanMartTools (Flutter/Express.js)** and the **Social DC** portfolio platform, managing end-to-end deployment on a private VPS.

PROJECTS

QuickValid.AI | Flutter, NestJS, TypeScript, LangGraph, Firebase, Gemini, Tavily

May 2025 – Present

- Launched an AI startup-validation app on the **Google Play Store**, reaching **120+ users** and **40+ daily active users** with initial paying customers (**\$3 MRR**).
- Built a **LangGraph + NestJS** evaluation engine running risk, market, and competitor analysis in **parallel** to a final verdict, grounded with **Tavily** search and real App Store/Play Store listing scrapers; streamed to the Flutter app via **SSE**.
- Designed the production stack end to end (**Flutter, NestJS, Firebase Auth, Firestore**) and a **credit-based** in-app purchase flow with **Google Play Billing**: the server verifies each purchase token through the **Google Play Developer API** and grants credits in a **Firestore** transaction before consuming it.

Grounded RAG Assistant | Python, FastAPI, Ollama, Qwen, ChromaDB

Sep 2026

- Built a production-style **RAG pipeline** end to end for an Applied AI Engineer take-home assessment: heading-based chunking, **nomic-embed-text** embeddings via **Ollama**, **ChromaDB** vector storage, dense k-NN retrieval, and **Qwen**-generated answers grounded with inline citations, served through a **FastAPI** API (**/ingest**, **/search**, **/ask**).
- Wrote and passed a **12-question eval suite** against a 13-document corpus covering grounding accuracy, conflicting-source resolution, refusal on unanswerable queries, ambiguity handling, and **prompt-injection defense**.

Agenix | NestJS, TypeScript, Gemini, PostgreSQL + pgvector, Drizzle ORM | Open Source

Aug 2025 – Present

- Designed and **open-sourced** an **autonomous AI agent backend** connecting Slack to Jira: listens via Slack Events API, resolves relevant tickets through **semantic search (pgvector)**, and autonomously creates tickets, assigns owners, and transitions status.
- Engineered a **tenant-scoped, multi-workspace architecture** with **Slack/Jira OAuth 2.0**, **AES-256-GCM** token encryption, and a custom **agent orchestration layer** (tool registry, agent runner, memory) built on **Gemini** function calling – shipped a complete MVP, with task-classification accuracy on ambiguous chat context as the current focus of iteration.

TECHNICAL SKILLS

Languages: JavaScript (ES6+), TypeScript, Dart, Python, Java, SQL, HTML/CSS

Frameworks: Next.js, NestJS, React Native, React.js, Node.js, Express.js, Flutter, FastAPI

Cloud & DB: Supabase, Firebase, Redis, PostgreSQL, MongoDB, Vector DBs (Chroma, pgvector), Vercel, Railway

AI/Agentic: RAG Pipelines & Evals, LangGraph/LangChain, Agent Orchestration, LLM Fine-tuning (LoRA, MLX-LM), Ollama, Prompt Engineering

Tools: OAuth 2.0, Webhooks, Git/GitHub, Docker, Sanity CMS

ACTIVITIES & AWARDS

Hackathon Wins: 1st – College MicroProject, 2nd – Zenith 2024, 3rd – Zignas 2023. **Leadership:** Core Member,

GDSC MLRIT – mentored 150+ students in 'Flutter Fire' workshops.
